

Great Southern Reef Bingo

This template was produced as part of the ocean literacy educational resources embedded in the teacher's guide **"Over and Under the Waves of the Great Southern Reef"**. This resource provides educators with marine science activities to increase ocean literacy in primary schools. The bingo game features images of the marine life commonly found in the coastal marine environments of the Great Southern Reef.

Method:

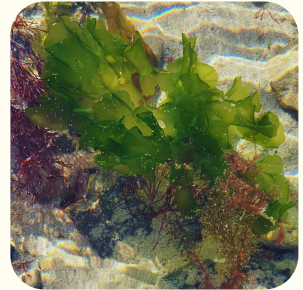

Use this bingo game as an engaging activity during your exploration of the local marine environment with your students. Organise students in small groups, each group with one or more bingo boards. Encourage students to observe their surroundings and search for the items on their bingo boards. The first team to successfully mark off four items in a row or in a diagonal pattern wins the game.

Note: If an excursion to the coastal area is not feasible, adapt this game by hiding items in your classroom or school. Students can play the game in the same manner, ensuring that the educational outcomes are still met.
